

NORTHWESTERN UNIVERSITY

Postdoctoral positions are available in the laboratory of Dr. Eva Gottwein at the Feinberg School of Medicine at Northwestern University. Our lab studies oncogenic mechanisms of Kaposi's Sarcoma-associated herpesvirus. Available projects focus on virally encoded microRNAs, the cell biology of KSHV-infected endothelial cells, and the investigation of viral B cell transformation using CRISPR/Cas9.

Successful applicants are highly motivated with strong hands-on experience and knowledge in cell biology, molecular biology, cancer biology and/or virology. A strong background in microscopy, molecular biology, bioinformatics and/or genomics is a plus. Ability to work independently and a high degree of self-motivation is a must. This position requires excellent communication skills, including good spoken and written English.

We offer a dynamic, interdisciplinary, and collaborative environment to support your career development.

Candidates with good scientific accomplishment are encouraged to apply. Your application should contain a short cover letter (0.5-1 page, stating your area of interest), three references with contact information, a CV, and bibliography.
